Cairo, Egypt | +201208147368 | abanobehab@gmail.com | linkedin.com/in/abanoubehabmalak | github.com/AbanoubEhab | abanoubehab.github.io

Professional Summary

System Administrator with 4+ years of experience managing multi-site Linux and virtualized infrastructure supporting 100+ users across 5 locations. Hands-on expertise in Proxmox VE virtualization, Docker/LXC containerization, Sophos firewall administration with site-to-site VPN, Zabbix monitoring, RAID/ZFS storage, and Frappe/ERPNext ERP administration. Proven track record reducing cloud costs by \$3,000+ through self-hosted infrastructure and cutting bandwidth consumption by terabytes through custom automation. CCNA certified with self-studied Windows Server (MCSA) fundamentals.

Technical Skills

- Virtualization & Infrastructure: Proxmox VE, Docker, LXC, VMware (familiar), Linux (Ubuntu, Debian, Fedora, Alpine), Windows Server
- Networking & Security: Sophos Firewall, Site-to-Site VPN, MikroTik, Cisco networking, VLAN configuration, DNS, SSL/TLS certificate management, Active Directory
- Monitoring & Automation: Zabbix, Python scripting, Bash scripting, Git, CI/CD, incident response
- Storage: RAID, ZFS, iSCSI, backup and disaster recovery planning
- Enterprise Systems: Frappe/ERPNext administration, Google Workspace administration (Gmail, Admin Console, user provisioning), CCTV systems (30+ camera deployments)
- Cloud: AWS (familiar), Ollama self-hosted AI/REST API integration

Work Experience

FWZ (formerly Gamers Lounge)

Jul 2023 – Present

System Administrator / IT Specialist

- Administer multi-site on-premises infrastructure across 5 locations using Proxmox VE virtualization, supporting 100+ users and 35+ endpoints
- Deploy and manage containerized services using Docker and LXC for internal applications
- Administer company-wide Frappe/ERPNext ERP system, cloud storage, password management, and inventory management platforms
- Manage company domains, local DNS resolution, and SSL certificate lifecycle
- Configure and monitor on-premises storage using RAID arrays and ZFS partitioning for data redundancy
- Design and deploy large-scale network hardware including MikroTik and Cisco equipment for live events
- Configure and maintain Sophos firewalls with site-to-site VPN across 5 remote sites
- Implement and administer Zabbix monitoring across 35+ endpoints, reducing incident response time
- Administer Google Workspace (Gmail, Admin Console) including user provisioning and permissions for 100+ employees
- Reduced cloud computing costs by \$3,000+ by integrating self-hosted AI (Ollama REST API) into internal web applications
- Reduced bandwidth consumption by multiple terabytes by architecting a local LanCache server handling download requests across 100+ computers

Gamers Lounge

Jul 2022 – Jun 2023

IT Helpdesk

- Managed hardware inventory and procurement for office and event infrastructure needs
- Diagnosed and resolved hardware and software issues across end-user systems
- Deployed and administered CCTV security systems across 5 remote locations with 30+ cameras

Canotech

May 2018 – Jun 2022

Technician: Photocopiers and Printers

- Maintained and administered 100+ Canon photocopiers, including full setup and configuration
- Trained 50+ client employees on device operation and management software

Certifications

- Cisco Certified Network Associate (CCNA)
- MCSA (Windows Server) — Self-Study

Key Projects

- Led cross-functional teams of 80+ people delivering network and systems infrastructure for large-scale live events: Red Bull Login, Esports Summit (ESS), IAC Final 2022, WarPros, Sona'ay ELfawda, Proseed, Campus Cultch, MPL
- Built a fully functional Linux-based [arcade machine](#) (custom hardware and software integration)
- Developed an automated [quota management](#) and alerting system using web scraping and APIs (Python)
- Architected a local LanCache server handling download traffic for 100+ computers, saving terabytes of bandwidth
- Integrated self-hosted AI (Ollama REST API) into internal web applications, saving \$3,000+ in cloud computing costs
- Deployed a CS2 game server using Docker inside an LXC container with persistent storage mounting, built for Esports Summit tournament infrastructure. Achieved ~7ms latency across Cairo during testing; planned site-to-site VPN access for the event before the tournament was cancelled.

Education

Ain Shams University

2020

Bachelor of Business Administration (BBA)
